This book investigates the process of spiritual borrowing between the emergent church (EC) and the Christian mystical tradition. From its inception, the EC has displayed interest in mystic practices, but the exact nature of this interest or how these practices are appropriated and reinterpreted in the EC context has not been researched. My research shows that the emergent church is appropriating Christian mystic practices by investing these practices with their own theological content. The practices themselves are changed to fit in their new context, showing that EC belief shapes EC behavior. My study adds a new case study perspective to the sociological examination of the process of spiritual borrowing, especially through close inspection of how a spiritual practice changes to fit a new theological context. Additionally, my book contributes to the study of the complex relationship between belief and behavior.

Cancer Therapy with Radiolabeled Antibodies explores the most current experimental and clinical advances in the newly emerging field of cancer radioimmunotherapy (RAIT). Providing a multidisciplinary and international context, some of the world's leading experts examine the problems and prospects of RAIT from radiation, immunological, chemical, physical, physiological, and clinical perspectives with both overviews and original research. Discussions cover the up-to-date clinical results in the RAIT of ovarian, breast, colorectal, and brain cancers, as well as the current status of RAIT in the management of B cell lymphomas. Radiobiology, dosimetry, radiochemistry, targeting biology in experimental models, clinical experiences in hematopoietic and solid tumors, and new approaches to improve cancer radioimmunotherapy are also discussed. In addition, new dosimetry concepts, new labeling methods, new concepts of antibody pharmacokinetics, and new methods to enhance selective cancer radioimmunotherapy are included.

Saudi Arabia has in recent years committed large-scale investments in digitalizing its economy. In this special report, we delve deeper into these developments through the eyes of the business and political leaders who are leading the charge. This special report comes in a new series of online publications, focusing on a certain aspect or industry in one of our 35 global markets. Our reports are consumed by investors, analysts, and decision makers around the world. This 74-page report covers digital governance, financial technology, telecoms and cybersecurity, logistics, industry, and education.

The emergence of Positive Psychology has highlighted the importance of studying the good life and how to attain it. Positive life outcomes, such as well-being, thriving, flourishing, and happiness were discussed and investigated. Among them, different orientations to happiness were identified, such as a life of pleasure, life of meaning, and life of engagement. Other outcomes, such as subjective and objective fulfillment in life or societal recognition have been less studied. Among the characteristics that facilitate positive outcomes, the VIA-classification of strength and virtues distinguishes 24 strengths with humor/playfulness being one of them. Only a small segment of humor entered the definition of humor as character strengths, namely the parts that contain some "goodness". Humor as a character strength facilitates a lot of positive outcomes, such as positive emotions and positive relationships, and there is a "lightness" accompanying humor/playfulness. The field is broader though and transcends the definition of humor as used in positive psychology, in at least two ways. First, there is actually a family of overlapping but still distinct concepts with different research traditions. We include next to humor (and types of humor), also laughter, playfulness, and cheerfulness. We think that more research is needed on how they do overlap and what makes them distinct. Second, while positive psychology is interested in the goodness of we do want to stress that there is the need to study the non-virtuous parts as well. That is, laughter may not only be expressing amusement but scorn directed at people, humor may be benevolent but there is also sarcasm, and playfulness may elicit positive emotions but also risk-prone and immature types of behavior. Therefore, the aim of this Research Topic was to collect current perspectives on humor, playfulness, laughter, and cheerfulness in both adults and children, to study their full diversity but also interrelations and overlapping features, to introduce new instruments or ways for their assessment in future studies, and to study their causes and consequences in a variety of life domains. We encouraged studies on differences due to gender or nationality, the embodiment in different groups (e.g., class clowns, psychiatric patients), or whether or not they can be trained. We also welcomed contributions from adjacent disciplines (e.g., education, leisure studies, or therapy/counseling) and different regions of the earth. The outcome is a set of 33 manuscripts from altogether 101 authors. Not all areas are covered and not all aims were met; while we made progress there is much left to do. In this sense, the merging of these topics may be the first milestone but like every milestone, it only marks the beginning of a long journey.

To advance education about ICT standardization, comprehensive and up-to-date teaching materials must be available. With the support of the European Commission, ETSI has developed this textbook to facilitate education on ICT standardization, and to raise the knowledge level of ICT standardization-related topics among lecturers and students in higher education, in particular in the fields of engineering, business administration and law. Readers of this book are not required to have any previous knowledge about standardization. They are introduced firstly to the key concepts of standards and standardization, different elements of the ecosystem and how they interact, as well as the procedures required for the production of standardization documents. Then, readers are taken to the next level by addressing aspects related to standardization such as innovation, strategy, business, and economics. This textbook is an attempt to make ICT standardization accessible and understandable to students. It covers the essentials that are required to get a good overview of the field. The book is organized in chapters that are self-contained, although it would be advantageous to read the book from cover to cover. Each chapter begins with a list of learning objectives and key messages. The text is enriched with examples and case studies from real standardization practice to illustrate the key theoretical concepts. Each chapter also includes a quiz to be used as a self-assessment learning activity. Furthermore, each book chapter includes a glossary and lists of abbreviations and references. Alongside the textbook, we have produced a set of slides that are intended to serve as complementary teaching materials in face-to-face teaching sessions. For all interested parties there is also an electronic version of the textbook as well as the accompanying slides that can be downloaded for free from the ETSI website (www.etsi.org/standardization-education).

This insightful book explores the challenging issues related to effective access to government information. Amidst all the chaos of today's dynamic information transition period, the only constants related to government information are change and inconsistency, yet with Government Information Collections in the Networked Environment: New Issues and Models, you will defeat the challenging issues and take advantage of the opportunities that networked government information collections have to offer. This valuable book gives you a fresh opportunity to rethink collecting activities and to tailor collections more precisely to fulfill the information needs of your local community. It will help you provide your patrons access to the full array and value of networked government information. Government Information Collections in the Networked Environment explores the changes and inconsistency of the new networked government information environment's transitional phase, with studies and solutions that will assist you in creating an information environment that may prove to be the greatest leveling force in library collecting. With this book, even the smallest community library can have the same government resources as those found in the largest of institutions. Throughout its pages, you'll explore new challenges and learn how to conquer them as the book discusses: equipment and software building strong access through user instruction resolving preservation and long-term archiving issues resolving the current problem of local access to government information creating Community Information Organization Projects investigating problems with digital collections discovering The Internet Scout Project redistributing data via the World Wide Web Those who seek out information from the government know first-hand how impressive the array of networked government information has become. Government Information Collections in the Networked Environment will teach you how to manage and manipulate electronic information to provide the best possible collections to your users.

SmartItems are the innovation with the power to protect your assessments from the effects of cheating, testwiseness, and theft, while also decreasing costs and improving fairness. In his new ebook, Dr. David Foster discusses a revolutionary concept in item and test design: SmartItems. Without hyperbole, the SmartItem can prevent all test theft, and almost all forms of cheating. Such a claim cannot be ignored, and we invite all to learn more in Dr. David Foster's new book.

The advent of hybridoma technology leading to the successful production of monoclonal antibodies against a variety of tumor-associated antigens has, during the last decade, provided a very powerful tool for research and clinical investigations. These highly specific reagents have essentially replaced the polysera of the earlier days. The successful demonstration of the many wide ranging capabilities of the monoclonal antibody technique has already begun to exert an enormous impact on diverse areas of research in basic science and medicine. In particular, the potential of monoclonal antibodies to serve as carriers for selective targeting of radionuclides to tumors for diagnosis or therapy, has stimulated an intense surge of research interest and even revived hopes of realizing Ehrlich's concept of the "magic bullet". Indeed, the technology appears to be on the threshold of a revolution in diagnosing and treating malignant disease. Much work remains to be done, however, and even though the progress has been impressive, results to date have shown only moderate success. There is no question that the limited success we have achieved thus far is merely a prelude to the many more exciting developments yet to come.

To support strategic planning efforts on noncommunicable diseases (NCDs), this book assesses the latest evidence on NCD prevalence and risk factors in Saudi Arabia, explores the health and economic burden of NCDs as well as their impact on human capital, and identifies key gaps in efforts to prevent NCDs and ways to address these gaps.

Because it has always represented a rich collaboration of the music, art, architecture, handicraft and science of its day, the organ, more than any other instrument, continues to reflect the spirit of the age in which it was built. The Organ as a Mirror of its Time, the first book to consider this instrument's historical and cultural significance, reflects the efforts of twenty leading scholars of the organ. The book chronicles the history of six organs in Scandinavia and Northern Germany, at least one specimen for every century from 1600 to the present. By considering their original contexts and their histories since they were built, as well as the extraordinary coincidences that link them together, the book offers a unique perspective on the cultural history of northern Europe. A CD with appropriate repertoire played on each of the six instruments accompanies the book.

This book constitutes the refereed proceedings of the Second International Conference on Pattern Recognition and Machine Intelligence, PReMI 2007, held in Kolkata, India in December 2007. The 82 revised papers presented were carefully reviewed and selected from 241 submissions. The papers are organized in topical sections on pattern recognition, image analysis, soft computing and applications, data mining and knowledge discovery, bioinformatics, signal and speech processing, document analysis and text mining, biometrics, and video analysis.

Challenges, Opportunities and Research Agenda

This book examines prominent issues in the Emerging Markets (EM) from a variety of disciplines in order to make useful societal contributions through knowledge exchange. EMs offer enormous opportunities, but realizing them is both challenging and risky due to inherent uncertainties of such markets. EM's also have unique characteristics that makes them different from developed countries. This causes implications for both theory and practice. These markets necessitate substantial adaptations of developed theories and approaches employed in the Western world. This book investigates problems specific to emerging markets, and identifies new theoretical constructs, hypotheses (re)development, and emphasizes institutional contexts. The chapters in this book establish new conceptual and theoretical paradigms from multidisciplinary perspectives concentrated in the areas of information systems, electronic government, and digital and social media matters. The book focuses on topics in these areas such as digital enterprises, sustainability, telemedicine, and Information Communication Technology (ICT) and surveys the potential challenges and opportunities that may arise. These concepts and topics covered in this book are vital for making the global economy more equitable and sustainable.
