***In the first edition of A Practical Guide to Stage Lighting, Steve Shelley cracked open his production book and showed how to prepare a lighting design and create the paperwork needed to mount a production. In the second edition, he pulled back the curtain and showed the methods and processes that go on before the light plot is finalized and ready to go to into the shop, even dealing with cutting the plot in half. In this third edition, Shelley throws the door wide open and shows step-by-step how to construct every lighting system in the Hokey light plot. Combining his diacritical analysis, killer drafting, and analytic use of the Slinky Method and Slinky Calculations, he presents the Periodic Table of Fundamental Lighting Systems and shows the basic methods used to create multi-instrument lighting systems. Highlights include: -Over 100 new topics, including analysis and application of the three categories of collaboration; a detailed examination of production meetings and one-on-one meetings; and meeting checklists with management and the creative team. -Over 50 new illustrations, including Shelley's Periodic Table of Fundamental Lighting Systems; groundplans, sections, and front elevations that illustrate basic***

**This practical guide provides artists, conservators, curators, and other heritage professionals with tools for understanding, evaluating, and approaching the care and treatment of modern metals. The proliferation of new metals—such as stainless steels, aluminum alloys, and metallic coatings—in modern and contemporary art and architecture has made the need for professionals who can address their conservation more critical than ever. This volume seeks to bridge the gap between the vast technical literature on metals and the pressing needs of conservators, curators, and other heritage professionals without a metallurgy background. It offers practical information in a simple and direct way, enabling curators, conservators, and artists alike to understand and evaluate the objects under their care. This invaluable reference reframes information formerly found only in specialized technical and industrial publications for the context of cultural heritage conservation. As the first book to address the properties, testing, and maintenance issues of the hundreds of metals and alloys available since the beginning of the twentieth century, it is destined to become an essential resource for conservators, artists, fabricators, curators, collectors, and anyone working with modern metals.**

***Veteran journalist and author of The Commandos Douglas Waller chronicles his rare and intimate experience with the training program for Navy pilots in this "engrossing saga that will likely become an unofficial recruiting tool for naval aviation" (Publishers Weekly). Waller, who was granted permission to participate in the pilots' grueling training regime, has written an absorbing behind-the-scenes account of the physical and psychological trials endured by the most specialized group of pilots in military history. From his bird's-eye view in the passenger's seat, Waller follows pilot trainees through two years of intense preparation. He offers vivid illustrations from the fray: hair-raising aerial dogfights; stomach-swallowing dive-bombing runs; high-speed tactical maneuvers grazing the desert floor; and numerous nerve-twisting aircraft carrier takeoffs and landings. In addition to his own experiences and those of the group of trainees he joins, his research is based on interviews with hundreds of other students and their instructors. Hurtling through the air at death-defying speeds, these pilots-in-training struggle to maintain their composure while withstanding conditions that are designed to challenge them to the very limits of human endurance. Waller's deftly drawn portraits of the men and women he encounters in this singular culture of elite pilots are as satisfying as his adventure narrative. The pilots, whose grit, determination, and mental agility operate on an elevated threshold, come into sharp focus behind Waller's keen lens: their***

Colour is one of the most complex elements of design and it is also what people respond to first on an emotional level, whether they are surveying a restaurant interior or browsing an online catalogue. This information is covered thoroughly, with clear and precise explanations and examples. Colour: The Professional's Guide is comprehensive, offering informative techniques, examples, inspiration and, above all, exemplary

solutions to fit the designer's every need, whatever their discipline. A born naturalist and a fearless traveler, Vladimir Dinets wrote travel guides, conducted field research, and lived a couple of lives before he was accepted into the PhD program in zoology at the University of Miami. He thought crocodiles were a dead-end research topic—survivors from the age of the dinosaurs but not much else—until he witnessed groups of up to seventy alligators performing mating choruses that included infrasound vibrations—a form of communication extremely rare in nature—and a “dance” unknown in the scientific literature but that resembled a scene from Jurassic Park. To prove his thesis about the language of crocodiles, he spent the next six years traveling around the world on shoestring budgets and in extreme circumstances, studying almost every living species. At the same time, as a man desiring companionship in life, he sought love. With adventures on five continents, *Dragon Songs* is his account of this quest. It includes an escape from a boiling lava lake in the Afar Desert, being chased up a tree by a tiger in India, hitching a ride with a cocaine smuggler in Bolivia, and diving with giant Greenland sharks—all in the name of studying crocodiles, among which he routinely paddled in his inflatable kayak. Of course, not everything went according to plan. But, in the end, his ground-breaking research helped change the field. And during the course of his adventures, he met and courted his future wife.
