From its origins the Italian battlefields of the Second World War, to movie roles as Audrey Hepburn's transport in Roman Holiday and Sting's stylish companion in Quadrophenia and on through the current vintage revival, the classic Italian motor scooter is an enduring design classic from the 20th century. Scootermania celebrates the superbly simple vehicles that are so symbolic of freedom, style and the modern world. Originating in the 1940s in Milan and Pontedera, Tuscany, the scooter became an enduring transport choice for young people and urban environments. Early chapters look at scooter racing and long-distance attempts, and their role as an anti-tank weapon in the French army. This is engaging coverage of place of scooters in popular culture from films, music and fashion including the way that a host of disparate groups has made the bikes their own – from the British Mods of the 1960s and 1980s to their role in American and Japanese fashion and in their Italian homeland. The evolution and design of classic models as the Vespa 150 GS and the Lambretta Li 150 Series 3 are covered while scooter stars such as Enrico Piaggio and Georges Monneret are celebrated in their own words. The book also includes a number of specially photographed features on modern scooter designers, collectors and artists. This is a maintenance and repair manual for the DIY mechanic, covering the Mercedes Benz 124 Series.

The effort of anthropometric historians to unearth the broad patterns of human biological well-being has led to the examination of nearly forgotten, centuries-old records from dusty archives in practically all the continents of the globe. French historians in the Annales tradition were among the first to adopt methods from physical anthropology and from the biological sciences, but the real expansion of the field dates from the pathbreaking work of Richard Steckel and Robert Fogel, which launched the discipline of anthropometric history on American soil. Research has confirmed that physical stature is related to nutritional status and therefore to real family income, and thus to the general standard of living. Historians and development economists will find this line of research useful, as it informs us about the standard of living of members of society for whom data on wages are seldom available—women, children, aristocrats, farmers, and slaves. In addition, this research has shown that the biological standard of living may diverge from conventional indicators of welfare during the early stages of industrialization. Thus, per capita income is an ambiguous measure of welfare during some phases of growth, and it must be supplemented with data from other indicators, such as physical stature. The essays in this volume broaden our knowledge of the human effects of the momentous economic changes of the last two centuries, extending analysis to regions for which such information has been lacking, including Russia, Canada, Indonesia, Italy, and Spain.

This book explores the practical and symbolic resources of legitimacy which the elites of medieval Scandinavia employed to establish, justify, and reproduce their social and political standing between the end of the Viking Age and the rise of kingdoms in the thirteenth century. Geographically the chapters cover the Scandinavian realms and Free State Iceland. Thematically the authors cover a wide palette of cultural practices and historical sources: geography, historiography, spaces and palaces, literature, and international connections, which rulers, magnates or ecclesiastics used to compete for status and to reserve halting glory for themselves. The volume is divided in three sections. The first looks at the sacral, legal, and acclamatory means through which privilege was conferred onto kings and ruling families. Section Two explores the spaces such as aristocratic halls, palaces, churches in which the social elevation of elites took place. Section Three explores the traditional and novel means of domestic distinction and international cultural capital which different orders of elites – knights, powerful clerics, ruling families etc. – wrought to assure their dominance and set themselves apart vis-à-vis their peers and subjects. A concluding chapter discusses how the use of symbolic capital in the North compared to wider European contexts.
