

Managerial Accounting Creating Value In A Dynamic Business Environment 10th Edition

Over the years there has been an accumulation of extensive research in management accounting. The traditional management accounting role of cost determination and financial control has been challenged and shifted to a more 'sophisticated' role of creating value through the development of 'new' management accounting techniques and practices. This book thoroughly reviews emerging issues of management accounting research. Each issue is reviewed by experts to explain the core concept, development, current criticisms and controversies and concludes by identifying future avenues for further research. Issues covered include the transformation of the management accounting function, strategic management accounting, environmental management accounting, balanced scorecard, performance management in non-profit organizations, inter-organizational performance measurement practices between supply chain partners, beyond budgeting, activity-based approach, target costing and throughput accounting.

This book is designed to meet the needs of CFOs, accounting and financial professionals interested in leveraging the power of data-driven customer insights in management accounting and financial reporting systems. While academic research in Marketing has developed increasingly sophisticated analytical tools, the role of customer analytics as a source of value creation from an Accounting and Finance perspective has received limited attention. The authors aim to fill this gap by blending interdisciplinary academic rigor with practical insights from real-world applications. Readers will find thorough coverage of advanced customer accounting concepts and techniques, including the calculation of customer lifetime value and customer equity for internal decision-making and for external financial reporting and valuation. Beyond a professional audience, the book will serve as ideal companion reading for students enrolled in undergraduate, graduate, or MBA courses.

EBOOK: Management Accounting, 6e

Value creation is at the heart of an economic enterprise, defining its capability to serve customers and generate profits and growth. This fact has led to an ever-increasing set of tools and techniques that start with customers, focusing on serving their preferences from the very inception of a product until its disposal. And this data is required to implement a value creation approach that has its roots in the Management Accounting System (MAS). The resulting model is called the Value-based Cost Management System (VCMS). If you or any manager want to take the lessons you learned in product development, process management, and marketing, this book will help you extend this knowledge to your MAS. This book makes this transformation both logical and easy to implement, with a focus on the new types of information that can be garnered when the MAS is modified to fit the value creation approach. The authors of the book will provide, upon request, a simplified automated data collection template that will ease the implementation process.

Virtually all developing, transitioning, and emerging-market economies are faced with one pressing concern at the moment: how to establish the groundwork for long-term economic performance and competitiveness in a diverse market. However, without the existence of good corporate governance in these economies, small enterprise will cease to exist in developing countries. Corporate Governance Models and Applications in Developing Economies is a collection of innovative research that contributes to the better understanding of corporate governance models by documenting the structures, principles, tenets, case studies, and applications for the development of good business practices in developing economies. While highlighting topics including risk management, financial distress, and insider trading, this book is ideally designed for corporate managers, executives, economists, strategists, investors, shareholders, students, researchers, academicians, business professionals, and policymakers.

Integrated Reporting is having a profound impact on corporate thinking and reporting. Value is being assessed on the basis of the sources of value creation used by an organisation and not through a financial lens alone. In Chief Value Officer: Accountants Can Save the Planet, Mervyn King, a global corporate governance and reporting leader, challenges some of the systemic issues preventing organisations from managing in an integrated value-creation way. The shareholder-centric governance model, currently favoured by most companies, will not result in changes to corporate behaviour that can create value in a sustainable manner. The book, therefore, firmly places the accountant in the position of changemaker @ the finance professional today should be more of a value officer than a financial officer. Consequently, the Chief Finance Officer should be known as the Chief Value Officer. This book explains this new approach. It encapsulates the essential reasons for adopting integrated reporting, explains its application to date and proposes the next steps needed to achieve change that will improve business, social and environmental sustainability.

Creating Value in a Dynamic Business Environment, Fifth Edition

Both the framework and the book make notable contributions to both theory and practice. The book will be of value to scholars and organization leaders in understanding the concepts of value creation and organizational effectiveness. It will be an aid to consultants in conceptualizing strategies for organizations and in counselling leaders on how to operationalize the concepts in their organizations. S.R. Mohnot, Global Business Review This is a very readable and excellently presented volume. It will interest anyone concerned with organizational effectiveness and the competing values model. Economic Outlook and Business Review I recommend this book to anyone wishing to understand and practice leadership. Leadership is often treated in mutually-exclusive categories, such as Theory X vs. Theory Y, managers vs. leaders, transactional vs. transformative, initiation vs. consideration, etc. The Competing Values Framework presented in this book transcends these dualities. It features eight competing but complementary values that are critical for managing today's complex and pluralistic organizations. The framework emphasizes the need for balance among the eight leadership roles, and an appreciation of the context, timing, and contingencies when the leadership roles facilitate and inhibit collective

endeavors. I have followed the development and testing of the Competing Values Framework over the years. It makes important contributions to both theory and practice. It stimulates positive learning outcomes for students and managers. Andrew H. Van de Ven, University of Minnesota, US Creating value in a firm is an enormously complex endeavor. Yet, despite its complexity, value creation is the objective of every enterprise, every worker, and every leader. The Competing Values Framework can help leaders understand more deeply and act more effectively. In the first book to comprehensively present this framework, the authors discuss its core elements and focus attention on rethinking the notion of value. They emphasize specific tools and techniques leaders can use to institute sustainable change. The Competing Values Framework was developed in response to the need for a broadly applicable model that would foster successful leadership, improve organizational effectiveness, and promote value creation. It helps leaders think differently about value creation and shows them how to clarify purpose, integrate practices, and lead people. Named one of the 40 most important frameworks in the history of business, it has been studied and tested in organizations for more than 25 years. Currently used by hundreds of firms around the world, the Competing Values Framework serves as a map, an organizing mechanism, a sense-making device, a source of new ideas, and a learning system. This accessible resource will be of great use to organizational scholars interested in the concepts of value creation, organizational effectiveness, and competing values; to leaders and managers interested in enhancing and creating value in their organizations; and to change agents and consultants who use the Competing Values Framework as part of their intervention strategies or who are looking to help improve organizations.

This book explores two combined approaches (strategy and accounting) from a cross-disciplinary perspective in order to improve knowledge of value creation in various contexts. Existing studies on this topic have generally adopted a purely account-based or strategy-oriented approach to address this issue. However, this book draws upon a number of well-defined theoretical and empirical backgrounds and methodologies. Since the 1980s, many changes have occurred and companies have increasingly focused their strategies on value creation. Consequently, new strategic directions have emerged, especially for managerial accounting. Management accounting and alignment with strategy could thus improve performance. This book encourages further thought and reflection on these issues which should be pursued in the future as firms face new challenges associated with the acceleration of digital transformation.

Thought-provoking and accessible in approach, this updated and expanded second edition of the Managerial Accounting: Creating Value in a Dynamic Business Environment provides a user-friendly introduction to the subject, Taking a clear structural framework, it guides the reader through the subject's core elements. A flowing writing style combines with the use of illustrations and diagrams throughout the text to ensure the reader understands even the most complex of concepts. This succinct and enlightening overview is a required reading for advanced graduate-level students. We hope you find this book useful in shaping your future career.
