With its uniquely student-focused approach and authoritative coverage of all key topics, The Oxford Textbook on Criminology is the essential companion to exploring crime and criminal justice. It acts as an energising springboard, equipping readers with the skills to form their own views and the confidence to see themselves as valued criminologists.

The emphasis upon methods of statistical research in psychology is often overlooked by beginning undergraduate students and subsequently, many find difficulty in approaching this unexpected yet so often integral topic of any given psychology degree. Subsequently this clearly written and comprehensive textbook offers itself as a guide to those students looking for a clear introduction on how to use statistics in psychological research. Crucially, students will be equipped with the key methods of statistical inference and learn how to interpret the results of various statistical tests. Expect to learn how to summarise data using the frequency distribution, measures of central tendency, variability as well how to employ the t-test and non-parametric tests for various types of groups and samples. This core adoptable textbook covers all areas of undergraduate statistics, with good formulas and explanations for calculations and will aid students with the knowledge and tools necessary to developing their ability to conduct reliable and methodical research using statistics. This is an incredibly helpful and informative read for undergraduate students taking research methods and statistics courses in psychology.

How do research students and their supervisors respond in a world of ‘fake news’, the destabilisation of public institutions and the rise of populism? The very foundations of our liberal democracies seem to be under threat, and this implicates social inquiry. Postgraduate research remains one of the few information spaces which are still free of politicisation and committed to validation. This book focuses on democracy in inquiry, and on the role of inquiry in a democracy – how research helps us to deliberate over what counts as of public value. It is a research methods book, but methods shaped by political and ethical purposes, and by the challenge of making judgements about what, in the public sphere, is worthy. We may be looking at a police training program, the siting of a clean energy project, a new school curriculum, maternal health program or an environmental adaptation project – in each case and in others like them we have to negotiate perspectives and claims, forge and justify a consensus, support competing stakeholders with the best information and analyses possible. And we have to make our work defensible – undeniable in the forum of public debate and exchange, examination and accountability. This book, full of examples from contemporary research projects, is designed to help navigate our way through the complexities of social research which focuses on judgements about public action. The book was written with research students and includes examples of their work. It recognises that supervisors often struggle as much as students in meeting the challenges of inquiry that involves some element of evaluative judgement – inquiry that potentially carries consequences. Where there are no quick-and-ready recipes, check-lists or theoretical frameworks – where we confront the particularities of the context in which the research takes place, we are all forced back onto good methodological thinking, and this is the pedagogical framing of the book.

Planning Research in Hospitality and Tourism provides a concise and clear approach to planning research projects which are a necessity in most hospitality and tourism courses taught at degree level. The text considers the particular characteristics of the hospitality and tourism industry, whilst providing a balanced approach toward both quantitative and qualitative methods of research. The text also carefully considers the international aspect of the industry and the people it employees, which supports the books aims of:
* Providing an excellent understanding of the basic principles of conducting research, in a straight forward “no nonsense” guide
* Carefully considering the particular characteristics of the hospitality and tourism sectors in relation to embarking on a research project in the area
* Including in each chapter an “International Dimension” section, as well as case studies, questions and reflections on the research process

This text starts by explaining the fundamental goal of good political science research—the ability to answer interesting and important questions by generating valid inferences about political phenomena. Before the text even discusses the process of developing a research question, the authors introduce the reader to what it means to make an inference and the different challenges that social scientists face when confronting this task. Only with this ultimate goal in mind will students be able to ask appropriate questions, conduct fruitful literature reviews, select and execute the proper research design, and critically evaluate the work of others. The authors' primary goal is to teach students to critically evaluate their own research designs and others' and analyze the extent to which they overcome the classic challenges to making inference: internal and external validity concerns, omitted variable bias, endogeneity, measurement, sampling, and case selection errors, and poor research questions or theory. As such, students will not only be better able to conduct political science research, but they will also be more savvy consumers of the constant flow of causal assertions that they confront in scholarship, in the media, and in conversations with others. Three themes run through Barakso, Sabet, and Schaffner's text: minimizing classic research problems to making valid inferences, effective presentation of research results, and the nonlinear nature of the research process. Throughout their academic years and later in their professional careers, students will need to effectively convey various bits of information. Presentation skills gleaned from this text will benefit students for a lifetime, whether they continue in academia or in a professional career. Several distinctive features make this book noteworthy: A common set of examples threaded throughout the text give students a common ground across chapters and expose them to a broad range of subfields in the discipline. Box features throughout the book illustrate the nonlinear, “non-textbook” reality of research, demonstrate the often false inferences and poor social science in the way the popular press covers politics, and encourage students to think about ethical issues at various stages of the research process.

A practical, highly accessible guide for novice researchers conducting qualitative research in public relations and marketing communications, this book guides the reader through all aspects of the research process.

A PhD is the start of a research career, and these students are the backbone of universities and research institutions. It is the opportunity for youthful energy and creativity to make a global impact and train future researchers to make a difference. However, the candidature can also be a period of confusion and regret due to lack of structure and understanding. Research Methods for Successful PhD is written to help PhD students and other young researchers navigate through this phase to give them a direction and purpose. It is a candid conversation developed from the experience of supervising 30 research students and publishing 400 papers over 20 years. The book recognizes that every student is different and has unique circumstances. It teases out the fundamental questions that we forget to ask, the method of relating to the supervisor, discusses methods to improve communication skills and explains how to get the work published.

Describing the fundamental elements of research methods for leisure, recreation and tourism, this new edition of a popular textbook is updated throughout. It covers the measurement of variables, sampling, questionnaire design and evaluation methods, and also a wider discussion of writing proposals, communicating research findings, cross-cultural research, and the use of new technologies in conducting research. Written by internationally renowned researchers in an accessible style, this book introduces both undergraduate and graduate students to the vital skills they will need to succeed in the leisure, recreation, tourism and hospitality industries.

Foundational chapters summarize current UN-based standards for indigenous rights and autonomy, with their implications for research practice. Coverage goes on to detail minimally-invasive data-gathering methods, survey current training and competency issues, and consider the scientist's role in research, particularly as a product of his/her own cultural background. From these guidelines and findings, students and professionals have a robust base for carrying out indigenous research that is valid and reliable as well as respectful and ethical. Among the topics covered:
· *Cultural theories and cultural dominance.*
· *The legal framework of research in indigenous contexts.*
· *The role of language within indigenous peoples' cultural rights.*
· *Methodology: how to optimally collect data in the field.*
· *Researchers' influence and philosophy of science.*
· *Learning how to prepare research in indigenous contexts.*
· *Research Methods in Indigenous Contexts is an important reference benefiting a wide audience, including students and researchers in the social sciences, humanities, and psychology; decision-makers of NGOs and GOs that act with regard to humanitarian aid, for tourism projects, or any other contingency with indigenous contexts; and policymakers interested in the aspects of human activity upon which indigenous cultural concerns are based.*

This fresh and innovative hybrid text/online material for undergraduate CJ RESEARCH METHODS uniquely addresses the fundamental teaching issue for this course: how to communicate and successfully teach students that their future success as criminal justice practitioners is linked to their acquisition of research skills. The author Brian Withrow, a former Texas State Trooper, widely published academic researcher, and teacher of the undergraduate methods course, consistently demonstrates how research skills aren't just essential to university academic researchers; they are essential to student success as criminal justice practitioners, and to all who want to succeed in an information economy. More than 80 short, sharply focused examples throughout the text rely on actual research that is conducted by, on behalf of, or relevant to criminal justice practitioners. The book engages students' interests like no other. The online materials provide a wide array of instructor support material, all written by the author, and also offer a unique feature, The Researcher's Notebook, which provides students (and their instructors) a series of structured exercises leading to the development and completion of a research question, conducting a literature review, and designing a research method that provides the data necessary to answer the research question - all with a minimal amount of instructor supervision. Research Methods and Solutions to Current Transport Problems

Proceedings of the International Scientific Conference Transport of the 21st Century, 9– 12th of June 2019, Ryn, Poland

Introduction to Qualitative Research Methods

This book shows students the steps involved in the research process, the various strategies for conducting a valid social inquiry, and most importantly, the persuasiveness and elegance of reliable social research. It highlights the link between academic research and the real world. Included are carefully chosen examples of each of the major methodological techniques-survey, interviews, fieldwork observations, experiments, content analysis, secondary analysis and program evaluation. Also included are selections on sampling strategies, research ethics and both qualitative and quantitative data analysis.

In this book four modes of designing research, experiments, quai experiments, surveys, and participant observation are introduced. Each is useful in a different setting and is best suited to answer a different type of question. Experiments are designed to answer questions about causes and effects. They require the experimenter to exercise control over what happens to whom. Experimenters randomly assign people or other units such as classes of students to different conditions and measure the effects of the treatment.

The book is dedicated as an auxiliary literature for academic staff of universities, research institutes, as well as for students of transport teaching. The aim of the conference was to present the achievements of national and foreign research and scientific centers dealing with the issues of rail, road, air and sea transport in technical and technological aspects, as well as organization and integration of the environment conducting research and education in the discipline of civil engineering and transport. International Scientific Conference Transport of the 21st Century was held in Ryn, Poland, in the 9th–12th of June 2019. The research areas of the conference were as follows:
• *transport infrastructure and communication engineering,*
• *construction and operation of means of transport,*
• *logistics engineering and transport technology,*
• *organization and planning of transport, including public transport,*
• *traffic control systems in transport,*
• *transport telematics and intelligent transportation systems,*
• *smart city and electromobility,*
• *safety engineering and ecology in transport,*
• *automation of means of transport. It also used by specialists from central and local government authorities in the area of deepening knowledge of modern technologies and solutions used for planning, managing and operating transport.*

Though psychology as a discipline has grown enormously in popularity in recent years, compulsory courses in research methods and statistics are seldom embarked upon with any great enthusiasm within the undergraduate and postgraduate communities. Many postgraduate and PhD students start their research ill-equipped to design effective experiments and to properly analyse their results. This lack of knowledge also limits their ability to critically assess and evaluate research done by others. This book is a practical guide to carrying out research in health psychology and clinical psychology. It bridges the gap between undergraduate and postgraduate study. As well as describing the various techniques and methods available to students, it provides them with a proper understanding of what a specific technique does - going beyond the introductory descriptions typical of most undergraduate methods books. The book describes both quantitative and qualitative approaches to data collection, providing valuable advice on methods ranging from psychometric testing to discourse analysis. For both undergraduate and postgraduate students, the book will be essential in making them aware of the full range of techniques available, helping them to design scientifically rigorous experiments, and effectively analyse their results.

Research Methods for Education, Second Edition takes the student by the hand and guides them through the complex subject of research methods in an engaging, witty and clear way. Each chapter is split into 'Context' and 'Practice' and both sections are packed with exercises, examples and comparative international material from other educational contexts, Peter Newby's book is the student-friendly text which demystifies the research process with clarity and verve. Key features: -written in a clear and friendly manner to help students feel more confident dealing with the complexities of research and particularly useful for those new to research or less confident with numbers -a mixed methods approach, which doesn't simply prioritise quantitative or qualitative methods, allowing for greatest possible coverage contains guidance on analytic procedures that require more advanced tools such as SPSS and Minitab -many excellent international examples and case studies specifically from education, which breaks away from a parochial focus on UK education system.
