in the Bennett series. It is carefully crafted to engage readers and motivate them to learn about astronomy and scientific inquiry. Topical Coverage is focused on topics that readers are curious about and that are most requested by faculty, such as extrasolar planets, the search for life in the universe, black holes, and dark matter and energy. The Process of Science is emphasized throughout the book, and each chapter has a full section devoted to exploring a case study on how the process of science has helped astronomers learn more about the topics in a given chapter. Active Learning is encouraged throughout the book. In-text “Think About It” questions prompt readers to think more deeply about the material as they

This book covers the key topics found in other one-semester astronomy books, but treats them with less detail, giving professors the opportunity to supplement the book with outside readings, articles, videos, and activities of their choice. For those concerned about the price of books, The Cosmic Perspective Fundamentals is the most affordable book on the market, without sacrificing the quality of its content or art program.
